**Device Connection**

The TESDA5V0B40P1Q0 is designed for protection from the damage caused by ESD and surge pulses.

The usage of the TESDA5V0B40P1Q0 is shown in Fig1.Protected line.

To minimize parasitic inductance in the board traces, all path lengths connected to the pins of TESDA5V0B40P1Q0 should be kept as short as possible.

To obtain enough suppression of ESD transient, a good circuit board is critical. Thus, the following guidelines are recommended:

- Let the path length between the protected lines and the TESDA5V0B40P1Q0 minimize.
- Place the TESDA5V0B40P1Q0 near the input terminals or connectors to restrict transient coupling.
- The ESD current return path to ground should be kept as short as possible.
- Use ground plane whenever possible.
