

50V, 500mA, Low-I_Q 30μA Low-Dropout Linear Regulator with Enable

DESCRIPTION

The TQL851CSV33 is a high-performance low dropout linear regulator for 3.3V with input range of 3V to 50V and low quiescent 30μA. TQL851CSV33 provides 2% output voltage accuracy and 500mA maximum driving current and is suitable for automotive or other supply systems. TQL851CSV33 just requires one small ceramic capacitor of 1μF to exhibit fast regulation and good stability. And it shows very low dropout voltage with typical 60mV in 100mA-load and 150mV in 250mA-load. The start operating voltage is 3V which is suitable to cranking condition of automotive system.

The device has an enable function to switch ON and OFF for power dissipation. And other protection functions such as thermal-shutdown and current-limit are against immediate damage.

APPLICATION

- Automotive Power Supply Systems
- General Power Supply applications

FEATURES

- AEC-Q100 qualified with the following results:
 - Device temperature grade 1: -40°C to 125°C
 - Device HBM ESD classification level H2
 - Device CDM ESD classification level C3
- 3V to 50V input voltage range
- 3.3V fixed output voltage
- Typical 60mV @100mA low dropout voltage
- 500mA output current
- Typical 30μA low quiescent current
- Typical ±2% output voltage accuracy
- 1μF Ceramic output stable capacitor
- Output current limit
- Over temperature protection
- RoHS compliant
- Halogen-Free

Note:

1. Stresses listed as the above "Absolute Maximum Ratings" may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.
2. Devices are ESD sensitive. Handling precaution recommended.
3. The device is not guaranteed to function outside its operating conditions.
4. Guaranteed by design.

APPLICATION INFORMATION

TQL851CSV33 is a high-performance low dropout voltage regulator. The device operates with a wide input voltage from 3V to 50V and up to 500mA of output current. It also provides a high accuracy output voltage for $\pm 2\%$ in all the load and line regulation.

Enable

The EN pin is high voltage tolerant pin. High input enables the device ON and low is disable which can be connected to microcontroller or digital control system. It can be connected to input power pin directly.

Thermal Shutdown (TSD)

Internal 160°C comparator will trigger temperature protection (TSD). TSD will shut down system, until internal temperature back to 130°C.

Current Limit

The TQL851CSV33 features Current Limit function to protect device from damage by excessive power dissipation such as OUT shorted to GND. It limits output current to maintain power dissipation in the safe region.
